

# Experience the Value of Automation Simply and Affordably

Achieve labor cost savings, improve turn-around time, and safeguard revenue through automation without making a significant upfront investment in technology implementation.

## CUMULUS™

AUTOMATION. FOR BETTER HEALTHCARE.

### Simple

Backed by Amitech's decades of healthcare expertise, the Cumulus team knows how critical your automated processes are to you, your patients, and your clinicians. The Cumulus™ team continuously monitors your processes, ensuring they produce value, perform flawlessly, adapt quickly to change, and improve user experience. Trust your processes to healthcare automation experts.

Many of the largest healthcare organizations have created enormous cost savings and efficiencies by making large, transformative, multi-year financial investments in automation technology platforms and capabilities. Most healthcare organizations don't have that technology investment capacity and need an alternative way to access the value of automation.

### Affordable

The fees for Cumulus™ are based on the processes you automate rather than the technology and services required to build, deliver, and service the automation platform. No minimum software licenses or ongoing administrative overhead are required. Instead, fees are based on process complexity and transaction volume and aligned with the value they return.

### Value

In healthcare, automation can reduce administrative costs by limiting the human labor required for mundane, repetitive activities and increasing the speed of many processes. Cumulus™ does not require the upfront time to provision infrastructure and implement automation software. Accelerate time-to-value with Amitech's HIPAA-compliant cloud platform and prebuilt automations.

## How Healthcare Automation as a Service Works

Adopting and deploying automation for the enterprise usually requires a steep investment in infrastructure, skills, and services and an ongoing cost to monitor and maintain the automations you build. Even with cloud-based software platforms investments are required to administer the software and update automations to keep up with system and business changes.

The total cost of ownership doesn't always align with the value delivered.

Amitech's Cumulus™ Healthcare Automation as a Service means:

- Cost savings and efficiency improvements through process automation
- Confidence that your automated processes are being looked after
- No investment in infrastructure or software licenses that may sit under-utilized
- No new cost for the ongoing maintenance and administration needed
